

Embargoed until 10:45am – 12 September 2007

Accommodation Survey: July 2007

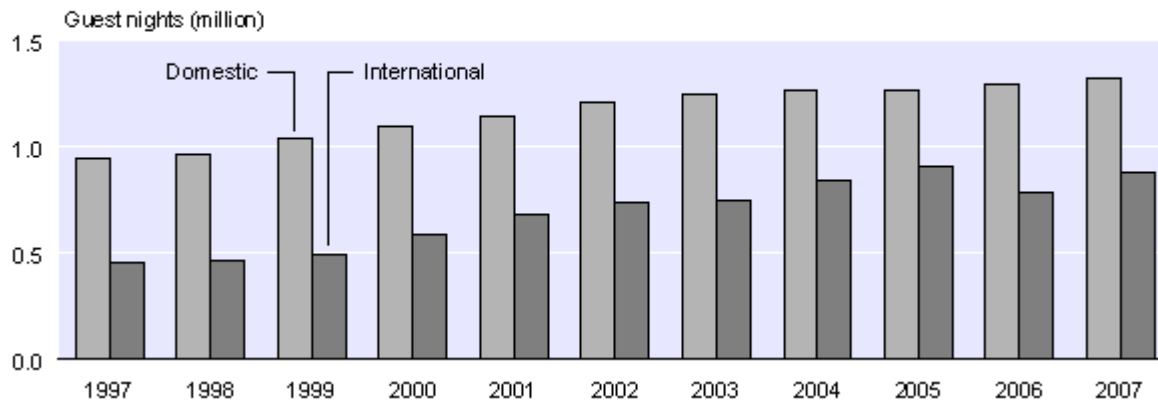

Highlights

In July 2007 compared with July 2006:

- Guest nights for international visitors were 13 percent higher.
- Increased guest nights for Australian visitors were a major contributor to the increase in international guest nights.
- Domestic guest nights were 2 percent higher.
- Total guest nights were 6 percent higher.
- Guest nights were 3 percent higher in the North Island and 10 percent higher in the South Island.
- Eight of the 12 regions recorded more guest nights.

International and Domestic Guest Nights

July 1997–2007

There is a companion Media Release published – [Accommodation Survey: July 2007](#).

Commentary

Total guest nights

Total guest nights in short-term commercial accommodation were 2.2 million in July 2007, up 6 percent compared with July 2006 and 2 percent compared with July 2005.

The trend in total guest nights has been increasing since January 2006. In July 2007, the trend level was 5 percent higher than in July 2006 and 6 percent higher than in July 2005.

Guest nights by island

Guest nights in the North Island were 1.3 million in July 2007, a 3 percent increase compared with July 2006, but down 3 percent when compared with July 2005, when the British and Irish Lions' rugby tour boosted the figures.

Since February 2006 the trend in North Island guest nights has been increasing. However, an apparent change in the direction of the trend seen in recent months should be treated with caution, as time series analysis suggests more data is required for the direction of the trend to be confirmed. In July 2007, the trend level was 3 percent higher than in July 2006 and 4 percent higher than in July 2005.

Guest nights in the South Island were 0.9 million, a 10 percent increase compared with July 2006.

The trend in South Island guest nights has been increasing since August 2005, after a period of flatness. In July 2007, the trend level was 7 percent higher than in July 2006 and 8 percent higher than in July 2005.

Guest nights by region

Eight of the 12 regions recorded more guest nights in July 2007 than in July 2006. The Auckland region (up 57,000 or 16 percent) had the largest absolute increase in guest nights, followed by Otago (up 40,000 or 12 percent) and Canterbury (up 29,000 or 9 percent).

The Taranaki, Manawatu-Wanganui region (down 9,000 or 6 percent) recorded the largest absolute decrease in guest nights, followed by Northland (down 6,000 or 7 percent).

Comparison with short-term overseas visitor arrival statistics

The Hot Off The Press release *External Migration: July 2007* shows that short-term overseas visitor arrivals in New Zealand for July 2007 were up 6,100 (4 percent) from July 2006. This follows an increase of 5,600 (4 percent) in June 2007 compared with June 2006.

Similarly, the number of stay days for all visitor arrivals in July 2007 was up 2 percent on July 2006. This follows an increase of 4 percent in June 2007 compared with June 2006.

In July 2007, the average length of stay for visitors arriving was 20 days, compared with 21 days in July 2006. The average length of stay was 18 days in both June 2007 and June 2006.

New Zealand resident short-term departures for July 2007 were down 1,300 (1 percent) on July 2006. This follows an increase of 20,500 (11 percent) in June 2007 compared with June 2006.

Origin of guests

International visitors spent 0.9 million guest nights in short-term commercial accommodation in July 2007, a 13 percent increase compared with July 2006, but a 3 percent decrease compared with July 2005.

Visitors from Australia recorded the largest absolute increase in international guest nights (up 71,000 or 28 percent). External migration data for July 2007 showed overseas visitor arrivals from Australia increased 15 percent compared with July 2006. Visitors from North America (down 15,000 or 18 percent) recorded the largest absolute decrease in guest nights.

In July 2007, international guest nights were 10 percent higher in the North Island and 15 percent higher in the South Island compared with July 2006. Ten of the 12 regions recorded more international guest nights, with Otago (up 41,000 or 21 percent) having the largest absolute increase, followed by Auckland (up 36,000 or 21 percent). An increase in the number of Australian guest nights to the Queenstown-Lakes/Central Otago area was the leading contributor to the increase in international guest nights in Otago in July 2007.

Domestic guest nights accounted for 1.3 million guest nights in July 2007, a 2 percent increase compared with July 2006 and a 5 percent increase compared with July 2005.

Domestic guest nights were at a similar level in the North Island and 5 percent higher in the South Island when compared with July 2006. Seven of the 12 regions recorded more domestic guest nights, with Auckland (up 20,000 or 11 percent) having the largest absolute increase, followed by Canterbury (up 16,000 or 9 percent). The Taranaki, Manawatu-Wanganui region (down 10,000 or 8 percent) recorded the largest absolute decrease in guest nights.

International Guest Nights
By country/region

There was a response rate of 56 percent to the Accommodation Survey question on origin of guests this month. The response rate for this question normally ranges between 55 and 60 percent. Figures for those establishments that failed to respond have been imputed (see Non-response imputation). Such high levels of imputation can affect data quality, especially for regional statistics and/or statistics by accommodation type.

Guest nights by accommodation type

Four of the five accommodation types recorded more guest nights in July 2007 than in July 2006. Hotels (up 54,000 or 7 percent) had the largest absolute increase, followed by backpackers/hostels (up 35,000 or 12 percent) and motels (up 24,000 or 3 percent).

Motels had the largest share of total guest nights (37 percent) in July 2007, followed by hotels (35 percent) and backpackers/hostels (15 percent).

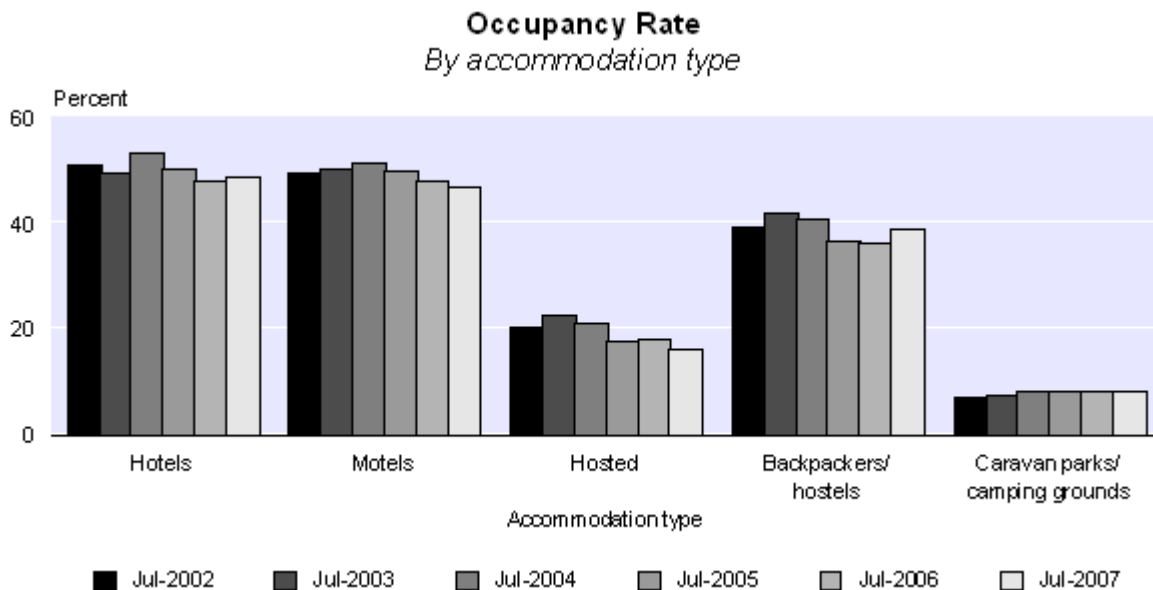

Occupancy rate

In July 2007, the occupancy rate, excluding caravan parks/camping grounds, was 44 percent, compared with 43 percent in July 2006.

Accommodation capacity, excluding caravan parks/camping grounds, in July 2007, was 4 percent above the July 2006 level.

Hotels recorded the highest occupancy rate (48 percent) of all the accommodation types in July 2007, followed by motels (47 percent) and backpackers/hostels (39 percent).

Excluding caravan parks/camping grounds, Otago had the highest occupancy rate (61 percent) in July 2007, followed by the Auckland (52 percent) and Wellington (46 percent) regions.

Non-response imputation

When respondents do not answer questions in the Accommodation Survey, Statistics New Zealand estimates the missing information based on data from similar establishments in the same and/or similar areas. For more information, please refer to the Technical notes of this release or contact Statistics NZ.

Response rates by accommodation type for July 2007

Accommodation type	Proportion of establishments responding to questions on guest nights, guest arrivals and stay unit nights	Proportion of the guest night estimate from establishments that responded to the question on guest nights	Proportion of the origin of guest estimate from establishments that responded to the questions on the origin of guests
Hotels	82 percent	92 percent	57 percent
Motels	80 percent	82 percent	56 percent
Hosted	84 percent	85 percent	61 percent
Backpackers/hostels	83 percent	88 percent	45 percent
Caravan parks / camping grounds	83 percent	88 percent	63 percent
Total New Zealand	82 percent	87 percent	56 percent

Technical notes

Population

The target population for this survey is all 'geographic units' (called 'establishments' in this publication) that are classified as short-term (less than one month) commercial accommodation providers operating in New Zealand. In terms of the Australian and New Zealand Standard Industrial Classification (ANZSIC), the target population is taken from class 5710 (accommodation), and the part of class 5720 (pubs, taverns and bars) that also provides accommodation.

The survey frame is all short-term commercial accommodation-providing geographic units belonging to an economically significant 'enterprise'. Economic significance is generally determined as being GST registered and having a turnover of at least \$30,000 per annum.

Survey errors

This survey aims for 100 percent coverage of the population (a full census). In practice, however, an overall response rate of between 76 and 80 percent is usually achieved. The remaining units are given imputed values based upon the characteristics of similar establishments in the same or similar regions. Imputation introduces unknown errors into the estimates, and users of the data should bear this in mind. The size of these unknown errors is difficult to quantify.

Other errors occur for reasons such as respondent error, frame quality and errors in processing. While every effort is made to minimise these errors, they will still occur. It is not possible to quantify their effect.

Trend estimates

For any series, the survey estimates can be broken down into three components: trend, seasonal and irregular. While seasonally adjusted series have had the seasonal component removed, the trend series have had both the seasonal and the irregular components removed. Trend estimates reveal the underlying direction of movement in a series, and are likely to indicate turning points more accurately than seasonally adjusted estimates.

The accommodation trend series are calculated using the X-12-ARIMA seasonal adjustment package. They are based on optimal moving averages of the seasonally adjusted series, with an adjustment for outlying values. The X-12-ARIMA package is an updated version of X-11-ARIMA, developed by the U.S. Census Bureau.

The trend estimates towards the end of the series incorporate new data as it becomes available, and can therefore change as more observations are added to the series. Revisions can be particularly large if an observation is treated as an outlier in one month, but is found to be part of the underlying trend as further observations are added to the series. All trend estimates are subject to revisions each month, but normally only the last two or three estimates are likely to be substantially altered.

Trend estimates versus month-on-month comparisons

Trend estimates reveal the underlying direction of the movement in a series. In contrast, comparisons between one month and the same month in the previous year(s) do not take account of data recorded in between these periods, and are subject to one-off fluctuations. Reasons for fluctuations include changes in the timing of holidays, international crises, and large sporting and cultural events.

Seasonally adjusted estimates

The X-12-ARIMA package has been used to produce the seasonally adjusted estimates referred to in the Commentary text. Seasonal adjustment aims to eliminate the impact of regular seasonal events. These may be due to climatic effects (such as more guests staying in camping grounds during the summer) or calendar effects (such as holidays). This makes the data for adjacent months more comparable. All seasonally adjusted figures are subject to revision each month.

Further information about [seasonal adjustment](#) is available on the Statistics New Zealand website.

Classification of accommodation type

The predominant capacity provided determines the accommodation type. For instance, if a business provides both motel and camping ground accommodation, but the majority of its stay units are motel rooms, then it would be classified as a motel. The classification system used is the New Zealand Accommodation Classification, broadly defined below:

- Hotels: includes both hotels and resorts
- Motels: includes motor inns, apartments and motels
- Hosted: includes private hotels, guest houses, bed and breakfasts, and holiday farm (farmstay) accommodation
- Backpackers/hostels
- Caravan parks/camping grounds.

Further information on the classification system is available on request.

Classification of residence of guest

Every third month (January, April, July and October), the survey asks all respondents to classify their guests as coming from the following regions:

Domestic

Auckland
Wellington
Rest of North Island
Canterbury
Otago
Rest of South Island
Don't know

International

Australia
Japan
Korea
Other Asia
UK and Ireland
Germany
Other Europe
North America
Other
Don't know

Other definitions

Business frame

A register (maintained by Statistics NZ) of all economically significant businesses operating in New Zealand from which the survey population is drawn.

Establishment

The smallest statistical unit operating within a single physical location and owned by a single enterprise. The term is used to represent what is usually called the 'geographic unit' in other Statistics NZ publications.

Guest night

A guest night is equivalent to one guest spending one night at an establishment. For example, a motel with 15 guests spending two nights would report provision of 30 guest nights of accommodation.

Stay unit

The term used to describe the unit of accommodation that is available to be charged out to guests (for example a powered site in a caravan park, a bed in a backpackers, a room in a hotel or motel).

Capacity (stay unit nights available)

This is the basic measure of an establishment's accommodation capacity. It is defined as one stay unit multiplied by one night. For example, 10 units in a motel available for guest use (whether occupied or not) for the full 31 days in July would have an accommodation capacity of 310 stay unit nights.

Occupancy rate

This derived variable is calculated by dividing stay unit nights occupied by stay unit nights available. In the case of the motel above, if six of its 10 units were occupied every night in July, it would have $6 \times 31 = 186$ stay unit nights occupied, and its occupancy rate would be 60 percent.

Average length of stay

This derived variable is calculated by dividing total guest nights by total guest first nights.

More information

For more information, follow the [link](#) from the Technical notes of this release on the Statistics NZ website.

Confidentiality

Data collected and information contained in this publication must conform to the provisions of the Statistics Act 1975. This requires that published information maintains the confidentiality of individual respondents.

- (1) Establishments that are temporarily closed for more than 14 days during a month are excluded from the results.
(2) Establishments primarily offering accommodation for periods of one month or more are excluded from the survey.
(3) Monthly capacity shows the number of stay units available and is affected by the number of days in a month.
(4) Hosted accommodation includes private hotels, guest houses, bed and breakfasts, and farmstays.

Accommodation Survey: July 2007
