Accommodation Survey: November 2007

Highlights

In November 2007 compared with November 2006:

- All five accommodation types recorded increased guest nights.
- Total guest nights increased 2 percent, to 2.8 million.
- Six of the 12 regions recorded higher guest nights.

Commentary

Total guest nights

Total guest nights in short-term commercial accommodation were 2.8 million in November 2007, an increase of 2 percent compared with November 2006 and 7 percent compared with November 2005.

The trend in total guest nights has been increasing since January 2006, although it has flattened in recent months. In November 2007, the trend level was 3 percent higher than in November 2006 and 6 percent higher than in November 2005.

Guest nights by island

Guest nights in the North Island were 1.6 million in November 2007, a 2 percent increase compared with November 2006 and an 8 percent increase compared with November 2005.

The trend in North Island guest nights has been flattening in recent months. In November 2007, the trend level was 2 percent higher than in November 2006 and 7 percent higher than in November 2005.

Guest nights in the South Island were 1.2 million in November 2007, a 2 percent increase compared with November 2006.

The trend in South Island guest nights has slowed in recent months. In November 2007, the trend level was 4 percent higher than in November 2006 and 6 percent higher than in November 2005.

Guest nights by region

Six of the 12 regions recorded more guest nights in November 2007 than in November 2006. The Auckland region (up 49,000 or 10 percent) had the largest increase in guest nights, followed by Canterbury (up 27,000 or 6 percent). Waikato recorded the largest decrease in guest nights (down 29,000 or 12 percent).

Comparison with short-term overseas visitor arrival statistics

The Hot Off The Press release *External Migration: November 2007* shows that short-term overseas visitor arrivals in New Zealand for November 2007 were down 1,100 (less than 1 percent) from November 2006. This followed a decrease of 6,700 (4 percent) in October 2007 compared with October 2006.

Similarly, the number of stay days for all visitor arrivals in November 2007 was down 3 percent from November 2006. This followed a decrease of 3 percent in October 2007 compared with October 2006.

New Zealand resident short-term departures for November 2007 were up 11,900 (8 percent) on November 2006. This followed an increase of 15,700 (10 percent) in October 2007 compared with October 2006.

Origin of guests

International visitors spent 1.4 million guest nights in short-term commercial accommodation in November 2007. The Auckland region recorded the highest number of international guest nights, followed by Canterbury and Otago.

Domestic guest nights accounted for 1.4 million guest nights in November 2007. The Auckland region also recorded the highest number of domestic guest nights, followed by Canterbury and Wellington.

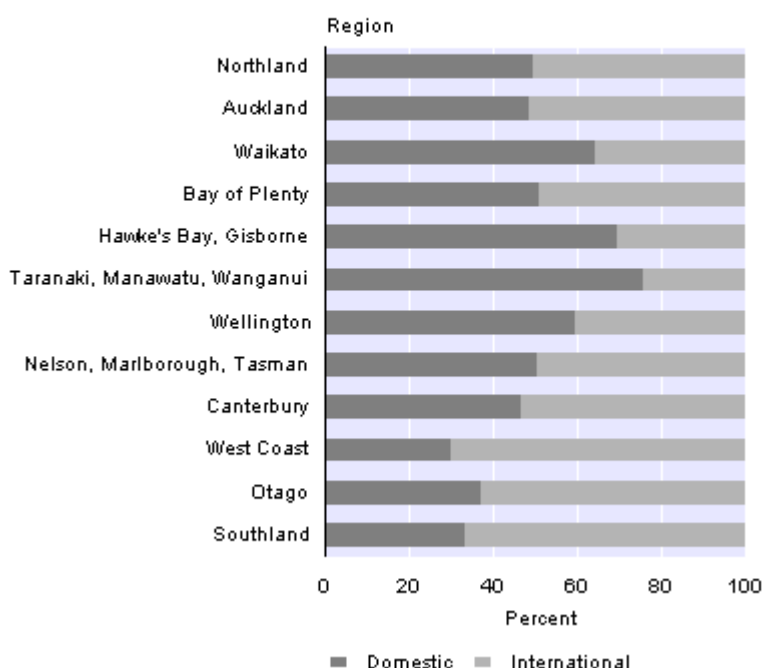

In November 2007, international visitors made up half of the total guest nights. In the North Island international visitors made up 44 percent of its total guest nights, whereas in the South Island, the proportion was 58 percent.

The West Coast region (70 percent) recorded the highest proportion of international guest nights in November 2007, followed by Southland (67 percent) and Otago (63 percent). The highest proportion of domestic guest nights was recorded by the Taranaki/Manawatu-Wanganui region (76 percent), followed by the Hawke's Bay/Gisborne region (70 percent) and the Waikato region (64 percent).

Domestic and International Guest Nights Share

By region

November 2007

Survey change

From the November 2007 survey month, information on domestic and international guest nights is available on a monthly basis. Previous information on 'origin of guest breakdown by country' is no longer available. This is the first stage of changes being made following a review on the Accommodation Survey, which aims to balance the need for high-quality information against the need to reduce respondent load.

In November 2007, there was a response rate of 63 percent to the Accommodation Survey question on 'origin of guests'. Previously, the response rate for this question ranged between 55 and 60 percent. Figures for those establishments that failed to respond have been imputed (see Non-response imputation). Such high levels of imputation can affect data quality, especially for regional statistics and/or statistics by accommodation type.

Guest nights by accommodation type

All five accommodation types recorded higher guest nights in November 2007 than in November 2006. The largest increases were for hotels and motels, which both increased by 20,000 or 2 percent, followed by caravan parks/camping grounds (up 14,000 or 3 percent).

Hotels had the largest share of total guest nights (36 percent) in November 2007, followed by motels (33 percent).

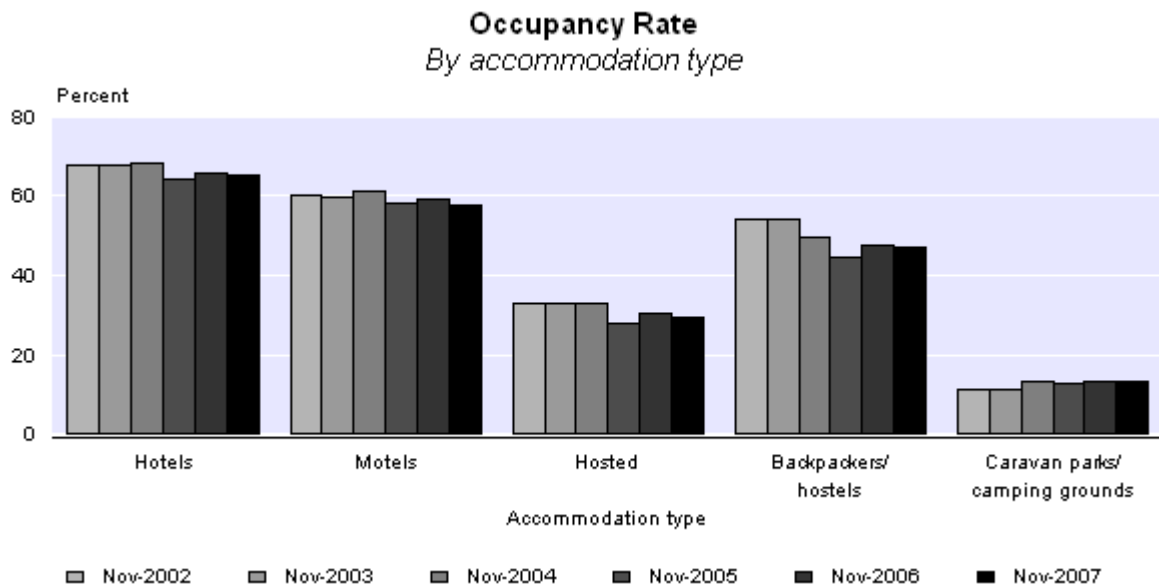

Occupancy rate

In November 2007, the occupancy rate, excluding caravan parks/camping grounds, was 56 percent compared with 57 percent in November 2006.

Accommodation capacity, excluding caravan parks/camping grounds, was 3 percent above the November 2006 level.

Hotels had the highest occupancy rate (65 percent) of all the accommodation types in November 2007, followed by motels (58 percent) and backpackers/hostels (47 percent).

Excluding the caravan parks/camping grounds category, the Auckland region had the highest occupancy rate (69 percent) in November 2007, followed by the Wellington region (66 percent) and Otago (59 percent).

Non-response imputation

When respondents do not answer questions in the Accommodation Survey, Statistics New Zealand estimates the missing information based on data from similar establishments in the same and/or similar areas. For more information, please refer to the Technical notes of this release or contact Statistics New Zealand.

Response rates by accommodation type for November 2007

Accommodation type	Percentage of establishments responding to questions on guest nights, guest arrivals and stay unit nights	Percentage of the guest night estimate from establishments that responded to the question on guest nights	Percentage of the origin of guest estimate from establishments that responded to the questions on the origin of guests
Hotels	80	91	65
Motels	76	81	61
Hosted	84	84	67
Backpackers/hostels	80	80	54
Caravan parks / camping grounds	82	90	73
Total	79	86	63

Survey sponsorship

Technical notes

Population

The target population for this survey is all 'geographic units' (called 'establishments' in this publication) that are classified as short-term (less than one month) commercial accommodation providers operating in New Zealand. In terms of the Australian and New Zealand Standard Industrial Classification (ANZSIC), the target population is taken from class 5710 (accommodation), and the part of class 5720 (pubs, taverns and bars) that also provides accommodation.

The survey frame is all short-term commercial accommodation-providing geographic units belonging to an economically significant 'enterprise'. Economic significance is generally determined as being GST registered and having a turnover of at least \$30,000 per annum.

Survey errors

This survey aims for 100 percent coverage of the population (a full census). In practice, however, an overall response rate of between 76 and 80 percent is usually achieved. The remaining units are given imputed values based upon the characteristics of similar establishments in the same or similar regions. Imputation introduces unknown errors into the estimates, and users of the data should bear this in mind. The size of these unknown errors is difficult to quantify.

Other errors occur for reasons such as respondent error, frame quality and errors in processing. While every effort is made to minimise these errors, they will still occur. It is not possible to quantify their effect.

Trend estimates

For any series, the survey estimates can be broken down into three components: trend, seasonal and irregular. While seasonally adjusted series have had the seasonal component removed, the trend series have had both the seasonal and the irregular components removed. Trend estimates reveal the underlying direction of movement in a series, and are likely to indicate turning points more accurately than seasonally adjusted estimates.

The accommodation trend series are calculated using the X-12-ARIMA seasonal adjustment package. They are based on optimal moving averages of the seasonally adjusted series, with an adjustment for outlying values. The X-12-ARIMA package is an updated version of X-11-ARIMA, developed by the U.S. Census Bureau.

The trend estimates towards the end of the series incorporate new data as it becomes available, and can therefore change as more observations are added to the series. Revisions can be particularly large if an observation is treated as an outlier in one month, but is found to be part of the underlying trend as further observations are added to the series. All trend estimates are subject to revisions each month, but normally only the last two or three estimates are likely to be substantially altered.

Trend estimates versus month-on-month comparisons

Trend estimates reveal the underlying direction of the movement in a series. In contrast, comparisons between one month and the same month in the previous year(s) do not take account of data recorded in between these periods, and are subject to one-off fluctuations. Reasons for fluctuations include changes in the timing of holidays, international crises, and large sporting and cultural events.

Seasonally adjusted estimates

The X-12-ARIMA package has been used to produce the seasonally adjusted estimates referred to in the Commentary text. Seasonal adjustment aims to eliminate the impact of regular seasonal events. These may be due to climatic effects (such as more guests staying in camping grounds during the summer) or calendar effects (such as holidays). This makes the data for adjacent months more comparable. All seasonally adjusted figures are subject to revision each month.

Further information about [seasonal adjustment](#) is available on the Statistics New Zealand website.

Classification of accommodation type

The predominant capacity provided determines the accommodation type. For instance, if a business provides both motel and camping ground accommodation, but the majority of its stay units are motel rooms, then it would be classified as a motel. The classification system used is the New Zealand Accommodation Classification, broadly defined below:

- Hotels: includes both hotels and resorts
- Motels: includes motor inns, apartments and motels
- Hosted: includes private hotels, guest houses, bed and breakfasts, and holiday farm (farmstay) accommodation
- Backpackers/hostels
- Caravan parks/camping grounds.

Further information on the classification system is available on request.

Origin of guests

From November 2007, information on total domestic and international guest nights will be available on a monthly basis but the breakdown by region or country will no longer be available.

Other definitions

Business frame

A register (maintained by Statistics NZ) of all economically significant businesses operating in New Zealand from which the survey population is drawn.

Establishment

The smallest statistical unit operating within a single physical location and owned by a single enterprise. The term is used to represent what is usually called the 'geographic unit' in other Statistics NZ publications.

Guest night

A guest night is equivalent to one guest spending one night at an establishment. For example, a motel with 15 guests spending two nights would report provision of 30 guest nights of accommodation.

Stay unit

The term used to describe the unit of accommodation that is available to be charged out to guests (for example a powered site in a caravan park, a bed in a backpackers, a room in a hotel or motel).

Capacity (stay unit nights available)

This is the basic measure of an establishment's accommodation capacity. It is defined as one stay unit multiplied by one night. For example, 10 units in a motel available for guest use (whether occupied or not) for the full 31 days in July would have an accommodation capacity of 310 stay unit nights.

Occupancy rate

This derived variable is calculated by dividing stay unit nights occupied by stay unit nights available. In the case of the motel above, if six of its 10 units were occupied every night in July, it would have $6 \times 31 = 186$ stay unit nights occupied, and its occupancy rate would be 60 percent.

Average length of stay

This derived variable is calculated by dividing total guest nights by total guest first nights.

More information

For more information, follow the [link](#) from the Technical notes of this release on the Statistics NZ website.

Confidentiality

Data collected and information contained in this publication must conform to the provisions of the Statistics Act 1975. This requires that published information maintains the confidentiality of individual respondents.

Copyright

Timing

Timed statistical releases are delivered using postal and electronic services provided by third parties. Delivery of these releases may be delayed by circumstances outside the control of Statistics NZ. Statistics NZ accepts no responsibility for any such delays.

Next release ...

Accommodation Survey: December 2007 will be released on 12 February 2008.

Statistics New Zealand: The first source of independent information for your key decisions.

Tables

The following tables can be downloaded from the Statistics New Zealand website in Excel format. If you do not have access to Excel, you may use the [Excel file viewer](#) to view, print and export the contents of the file.

List of tables

1. Establishments, capacity, guest nights, occupancy rate and average stay, by accommodation type
2. Occupancy rate excluding caravan parks/camping grounds, by region
3. Total guest nights
4. Seasonally adjusted and trend guest nights, by accommodation type
5. North Island guest nights
6. South Island guest nights
7. Regional guest nights

Accommodation pivot tables

The Accommodation pivot tables provide more detailed information, breaking the survey variables down by regional tourism organisation areas and territorial authority areas.

- **Regional Tourism Organisation (RTO) Area by Accommodation Type (Type)**
Contains number of establishments, capacity, occupancy rates, guest nights, guest arrivals, length of stay and some ratios of these variables.

The graph on the first worksheet will change to display the RTO and Type you select on the second worksheet. When printing the graph, select a cell rather than the graph so the heading will print.

- **Total Accommodation by Territorial Authority (TA)**
Contains number of establishments, capacity, occupancy rates, guest nights, guest arrivals, length of stay and some ratios of these variables.
- **Origin of Guests and Employment Information by Regional Tourism Organisation (RTO)**
Contains domestic and international guest night variables and employees.

Printing a selection of data in a spreadsheet

If you only want to print out some of the information in a spreadsheet, either select the pages you want in the print box, or hide the data you don't want to print by highlighting the columns or rows of data you don't want, then right click the mouse and select 'Hide'.

- (1) Establishments that are temporarily closed for more than 14 days during a month are excluded from the results.
(2) Establishments primarily offering accommodation for periods of one month or more are excluded from the survey.
(3) Monthly capacity shows the number of stay units available and is affected by the number of days in a month.
(4) Hosted accommodation includes private hotels, guest houses, bed and breakfasts, and farmstays.
(5) Percentage changes are calculated on unrounded figures.

(1) All figures are subject to revision when the seasonal adjustment program is run each period.

(2) The seasonally adjusted series differs from the actual series in that the seasonal changes have been removed.

(3) The trend series differs from the actual series in that both the seasonal and irregular components have been removed.
